What is the National Joint Registry?
The role of the National Joint Registry (NJR) for England, Wales, Northern Island, Isle of Man and the States of Guernsey is to improve patient safety and monitor the results of joint replacement surgery. With your consent, the information held on the registry helps to find out which are the best performing artificial joints, the most effective types of surgery and help surgeons quickly decide whether patients need to return to hospital if implant problems are found.

How does the NJR help patients?
The NJR provides information and evidence to:

- Empower patients by helping them find out more about the implants available to them
- Help surgeons choose the best artificial joints (implants) for patients
- Improve patient safety by monitoring how well implants, surgeons and hospitals perform and take action where it is needed
- Give hospitals, surgeons and implant manufacturers feedback about their performance to help them improve patient care

Why does the NJR need my personal details?
Your personal details allow the NJR to link you to the implant(s) you received during surgery. If, for instance, you need another operation in the future, the NJR can measure the time between the operations. Adding together this information from all patient operations tells us how well different implants, hospitals and surgeons are doing. **Without using personal details to link operations, the NJR cannot find out about problems with implants, hospitals or surgeons.**

Personal details needed by the NJR are:

- Name
- Date of birth
- Postcode
- NHS number
- Contact details

The NJR might also give you the opportunity to take part in patient feedback surveys in the future, to give your views on your experiences and how the surgery has made your life better so we can better understand patients’ reported outcomes. You do not have to give us your contact details if you don’t wish to take part in any surveys and if you don’t this will not affect your care.

NJR data and other healthcare information
Operation and patient information in the NJR is used to link to other healthcare information, including data held by NHS digital and the NHS Wales Informatics Service. Amalgamated data is analysed and made available to surgeons, hospitals and manufacturers - without any of your personal details - as part of our feedback services. Doing this improves the NJR’s ability to monitor patient safety and patient outcomes. It also means that people and organisations involved in improving joint replacement surgery can better understand and develop improved, or more cost-effective medical treatments.

NJR and research
Operation and patient information in the NJR may be used for medical research. The purpose of this research is to improve our understanding and treatment of joint problems.

The majority of our research uses only anonymised information which means it is impossible to identify individuals. From time to time researchers may wish to gather further information. In these cases we would seek your approval prior to disclosing your contact details. You do not have to take part in any research study you are invited to take part in and saying no does not affect the care you receive.

Please be reassured that the storage, release and use of this data are subject to very strict controls.

You can find examples of how we use data for research at [www.njrcentre.org.uk](http://www.njrcentre.org.uk) as part of our Research Library.
Do I have to give my consent?
No. If you do not consent, your operation details will be stored on the NJR without any personal details, so you cannot be identified. If you change your mind about consenting to the NJR holding your personal details, please contact the NJR Centre – see ‘Finding out more’ below.

In order to ensure high quality of the information within the NJR and to avert unfair conclusions being made about performance related to hospitals, particular surgeons or types of joint replacement, we will periodically ask hospitals to send a list of related surgeries already registered in their own system and compare their data against NJR’s to look for any missing records. This list will include personal details of patients that haven’t consented. Their personal data will not be stored in the NJR but used only to report back to the hospital if any records are found to be missing.

Is my information safe?
Your personal details are kept confidential at all times. Very strict rules and secure procedures are in place to ensure that your information is kept safe. You can ask for a copy of your personal data held on the NJR by emailing or writing to the NJR Centre.
